## Instructions for using this template

- $1. \ Aim\ to\ develop\ 5-10,\ potentially\ measurable\ ProLos.\ (\textit{This is an approximate number and may be more\ or\ less\ depending\ on\ the\ department.)$
- 2. Enter course SLOs of required courses for degree in columns. (Cut and paste from Socrates)
- 3. Determine how to include SLOs from electives (i.e. all electives or sample courses)
- 4. Examine course SLOs for common themes and develop a ProLO to reflect those themes. For example, major areas of knowledge, skills or abilities are often reflected across several courses. However, it is possible that a major theme and associated ProLO is only reflected in one or two courses of a program.
- 5. Some course SLOs may be unique and not rise to the level of a ProLo.
- 6. Some ProLos may result from completing a series of courses and do not present themselves clearly in individual courses.
- $7. \ Write ProLos in specific terms to differentiate the outcomes identified, but be broad enough to encompass the variety of paths possible to achieve that outcome.$
- 8. Utilize Bloom's taxonomy (3 domains) to clarify the level of the outcome and focus of future assessment.
- 9. Utilize internal and external sources (collaboration, transfer institution outcomes, IMPAC, professional organizations, industry, accreditating bodies, etc.) to refine outcomes.
